

REMOTE ACCESS FROM ANY BROWSER

Remote Spark is specialized in the development of secure remote access solutions without borders or limitations. Utilizing HTML5 technology, SparkView turns any device with a browser into feature rich, high performance remote access clients - client roll-out and management costs are eliminated. SparkView can seamlessly be integrated into existing infrastructures.

- RDP, VNC, SSH, Telnet
- Local Printing, File Sharing
- Session Shadowing and Recording
- SSL and TLS

No Java

No Flash

No ActiveX

No Plugin

No Rollout

SparkView can be installed in minutes on servers or VMs using Windows or Linux OS. Please contact us for access to our demo system, test installations and more information.

REMOTESPARK

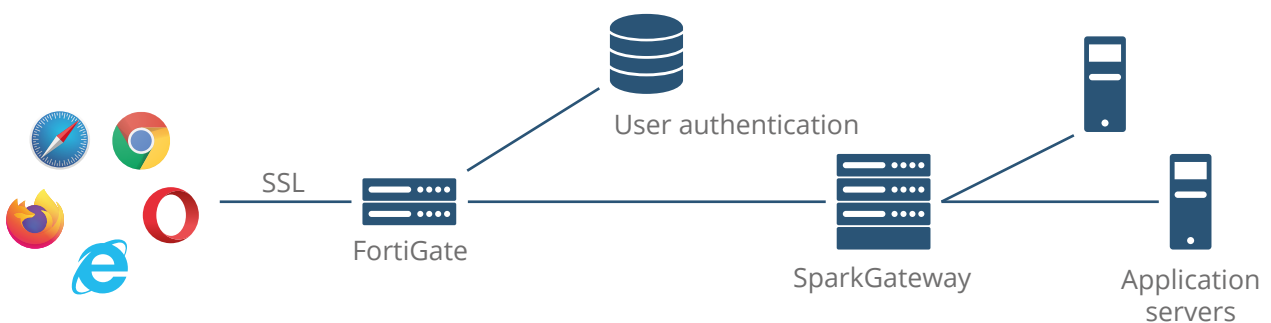

BEFORE

- VPN vendors require specific remote access clients for each device or OS (Windows, Linux, iOS, Android etc.)
- Deployment, management and updates are labor intensive
- This results in increased support costs
- Extremely vulnerable solution due to potential incompatibilities (Java, Plugins etc.)

AFTER

- Universal remote access from any browser (HTML5)
- No installation on clients or target systems required
- Client rollout and management costs are eliminated
- Fortigate as single point of administration (security, access, authentication)
- SparkGateway installed in default mode, no further configuration required
- Remote access to full desktops, VMs, servers or application streaming mode
- Fast and feature rich browser enhancements (local printing, file sharing, session shadowing etc.)
- Affordable pricing due to subscription model, no upfront investment

SparkView can be installed in minutes on servers or VMs using Windows or Linux OS. Please contact us for access to our demo system, test installations and more information.
