

DHL Global Forwarding launches GoGreen Plus Service to reduce emissions in air freight

- After the successful implementation in ocean freight, customers can now easily book GoGreen Plus for air freight
- The launch is a key milestone in making the global logistics industry greener
- GoGreen Plus is part of Deutsche Post DHL Group's mid-term sustainability roadmap for 2030, working towards net zero emission by 2050
- Thomas Mack, Global Head of Air Freight at DHL Global Forwarding: "Our new GoGreen Plus Service is a simple and efficient way to directly reduce CO₂ emissions in the supply chain"

Bonn, February 24, 2022: DHL Global Forwarding, the air and ocean freight specialist of Deutsche Post DHL Group, expands its GoGreen Plus Service to provide real emissions reductions through carbon insetting. After successfully introducing the GoGreen Plus Service for ocean freight, customers can now also easily neutralize their CO₂ emissions for air freight on all trade lanes. Following the one atmosphere approach, emissions are reduced by replacing the amount of conventional fossil fuel needed with sustainable fuel. Customers can easily pick and choose which parts of their supply chain they want to truly decarbonize. The GoGreen Plus Service can be easily added while booking online, e.g., an air freight shipment via the myDHLi customer platform. The launch of Deutsche Post DHL Group's decarbonized range of GoGreen Plus products is a crucial milestone in making the global logistics industry greener and more sustainable. Other divisions are also in the process of developing their GoGreen Plus Service, as a part of Deutsche Post DHL Group's sustainability strategy and designed as a Group-wide service offering.

"Every airplane and vessel emit their exhaust gases into the same atmosphere, and it is not decisive on which route or which means of transport biofuels are used," says Thomas Mack, Global Head of Air Freight at DHL Global Forwarding. "From a technological standpoint, our GoGreen Plus Service is currently the simplest, most efficient and sustainable way to reduce CO₂ emissions in transportation. As one of the world's leading logistics service providers, we see it as our responsibility to lead the way to greener transportation and to set a good example for others to follow."

The GoGreen Plus Service is based on the displacement principle: the more customers book the service; the more alternative fuel or clean technology is used - making transport chains greener step by step. Following this principle, the appropriate amount of biofuel is purchased for the respective air or ocean freight shipment and used in the partners' ships and aircrafts. Just recently, DHL Global

Forwarding ordered large volumes of sustainable aviation fuel through Air France KLM Martinair Cargo and United Airlines' Eco Skies Alliance. The emission reductions also help DHL's customers to work towards their climate targets. With the "Book & Claim" mechanism, DHL can pass on the benefits of lower greenhouse gas emissions (Scope 3 emissions) to its customers.

With the mission to achieve net-zero emissions by 2050 ("Mission 2050"), Deutsche Post DHL Group strives for clean operations for climate protection. The new product offering GoGreen Plus is part of the Group's mid-term sustainability roadmap for 2030 and contributes to the sub-target of having at least 30 percent of fuel requirements covered by sustainable fuels. To reduce CO₂ emissions in line with the Paris Climate Agreement, the Group will spend €7 billion in sustainable fuel and clean technologies by 2030.
