4 KEY FINDINGS

• Section 1: Summary data on killings in Nigeria's geopolitical zones and states

The data on killings shows that there is reason to believe that in Nigeria (especially in the northern states) jihadist-related actors are targeting Christians. There is anecdotal evidence that the security forces tend not to give protection and sometimes even take part in the violence against Christians.

• Section 2: Summary data on abductions in Nigeria's geopolitical zones and states

The data on abductions confirms the impression that in Nigeria (especially in the northern states) jihadist-related actors are targeting Christians. Although at first sight it would seem that the number of Muslims and Christians abducted in the second reporting period were similar, further analysis shows that there is a significantly higher proportion of Christians being abducted than Muslims.

• Section 3: Distinguishing attacks on communities from other forms of attack

The data that distinguishes between **attacks on communities** and **other forms of attack** confirms the impression that in Nigeria (particularly in the northern states) jihadist-related actors are targeting Christians - especially by attacking their communities. Everyone in Nigeria knows where the Christian communities are located. It is not simply a question of meeting people somewhere by chance and attacking them irrespective of their religious background.

• Section 4: The spread of attacks over the year

The data clearly shows that the majority of attacks with the highest number of killings take place in the Nigerian farming season. Abductions are more equally spread over the year. Attacks during the farming season have a greater impact on the lives of the victims than attacks at any other time. This finding strengthens the suspicion that the attackers aim to kill or starve their victims, especially the Christians in northern Nigeria. Some call this "genocide by attrition".

Introduction

The data presented in this report is the result of a two-year project of data-gathering by Nigerian partners on violence within the country. Primary data is the main source. Secondary data is also taken into account but only after verification by the project partners. The first phase of the project was from 1 October 2019 to 30 September 2020. The second phase from 1 October 2020 to 30 September 2021.

The project tried to be comprehensive in its registration of killings. It did not limit itself to one religious group alone (see Section 1 below).

However hard one tries, a data-gathering project like this one is never complete since much violence goes unreported. Nevertheless, the researchers trust the data supplied gives a balanced indication of the situation in the country over the reporting periods.

The numbers supplied in this report are really just the 'tip of the iceberg'. Incidents involving killings and abductions often represent a whole spectrum of violence and suffering: Communities raided and/or permanently occupied; women and girls raped and/or abducted; fields destroyed and/or occupied; people robbed of their property and livelihood; houses of worship abandoned, closed or destroyed; people driven from their homelands into dire situations of internal displacement.

1. Summary data on killings in Nigeria's geopolitical zones and states

People killed in the context of jihadist violence were categorized according to their religious background: Christian, Muslim or African Traditional Religionist (ATR). In some cases the religious identity of the victims was unknown. The data also covers members of security forces killed and jihadist actors killed. People killed in other contexts are mentioned in the Table 1 but not distinguished according to their religious background.

The numbers of Muslims killed through local vigilantes' self-defense are included under 'jihadist related violence', as are Muslims killed by retaliatory attacks by Christians on Muslims. However, the data shows that the majority of Muslims were killed by jihadists (Boko Haram, ISWAP, armed Fulani herdsmen, 'bandits') and not by Christians.

Table 1 compares the killings recorded for the two reporting periods under study:

- i. October 2019 to September 2020 indicated in the column headings as 2020.
- ii. October 2020 to September 2021 indicated in the column headings as 2021.

From Table 1 it is possible to compare the total number of Christians/Muslims killed in the 2 reporting periods. The data shows that Christians were disproportionally affected by killings in the context of attacks by Boko Haram, ISWAP, armed Fulani herdsmen and 'bandits':

- The total number of Christians killed in the 2020 period was 3,613 and in the 2021 period 4,303. This gives an overall total of 7,916 Christians killed.
- The total number of Muslims killed in the 2020 period was 1,005 and in the 2021 period 1,230. This gives an overall total of 2,235 Muslims killed.

For both religious groups, there was an increase in killings of around 20% in the second reporting period.

Table 1: Number of people killed in the 2 reporting periods

(Please note: In contrast to USA/UK usage, this table uses European standard "," for decimal points and "." Instead of a comma to mark thousands.)

Appendix 1A and 1B give the details per state for both reporting periods.

Tables 2 and 3 below now take into account the size of the Christian and Muslim populations in the geopolitical zones and states where the killings took place. Based on the different sizes of their populations in the various states, it follows that the number of Christians killed is proportionally much higher than the statistics in Table 1 show. This applies for both reporting periods.

Table 2 gives the data for the first reporting period. Whereas the total number of Christians killed was 3,613 compared to 1,006 Muslims, thus indicating that 3.6 times as many Christians were killed as Muslims, when the Christian/Muslim population levels of each region is factored in, the number of Christians killed is proportionally 9,651, which is **9.6 times more than the number of Muslims killed** in jihadism-related violence. That is 2.7 times more than when the religious demographics are excluded.

Appendix 2A and 2B give the details per state for both reporting periods.

KEY FINDING:

The data on killings shows that there is reason to believe that in Nigeria (especially in the northern states) jihadist-related actors are targeting Christians. There is anecdotal evidence that the security forces tend not to give protection and sometimes even take part in the violence against Christians.

2. Summary data on abductions in Nigeria's geopolitical zones and states

In this section, the same method has been used as for the killings in Section 1. People abducted in the context of jihadist violence were categorized according to their religious background: Christian, Muslim or African Traditional Religionist (ATR). In some cases the religious identity of the victims was unknown. The data also covers members of the security forces abducted. People abducted in other contexts are mentioned in the table but not distinguished according to their religious background.

Table 4 compares registered abductions for the two reporting periods under study:

- i. October 2019 to September 2020 indicated in the column headings as 2020.
- ii. October 2020 to September 2021 indicated in the column headings as 2021.

From Table 4 it is possible to compare the total number of Christians/Muslims abducted in the 2 reporting periods.

In the first reporting period, the data shows that Christians were disproportionally affected by abductions in the context of attacks by Boko Haram, ISWAP, armed Fulani herdsmen and 'bandits': The total number of Christians abducted in the 2020 period was 977 compared to 85 Muslims.

In the second reporting period, the numbers were more similar. The total number of Christians abducted in the 2021 period was 2,312 compared to 2,243 Muslims. Although compared to the first reporting period both religious groups suffered a great increase in abductions, 26 times as many Muslims were abducted in the second reporting period than in the first. This can be seen in Table 4 as a percentage increase of 2,539%.

| Compariso | Comparison registered abductions (i) Oct 2019 - Sept 2020 with (ii) Oct 2020 - Sept 2021 | | | | | | | | | | | | | |

Table 4: Number of people abducted in the 2 reporting periods

(Please note: In contrast to USA/UK usage, this table uses European standard "," for decimal points and "." Instead of a comma to mark thousands.)

Appendix 3A and 3B give the details per state for both reporting periods.

Tables 5 and 6 below now take into account the size of the Christian and Muslim populations in the geopolitical zones and states where the abductions took place. Based on the different sizes of their populations in the various states, it follows that the number of Christians abducted is proportionally much higher than the statistics in Table 4 show. This applies for both reporting periods.

Table 5 gives the data for the first reporting period. Whereas the total number of Christians abducted was 977 compared to 85 Muslims, thus indicating that 11 times as many Christians were abducted as Muslims, when the Christian/Muslim population levels of each region is factored in, the number of Christians abducted is proportionally 5,044, which is **59 times more than the number of Muslims abducted** in jihadism-related violence. That is 5.2 times more than when the religious demographics are excluded.

Table 5: Number of Christians/Muslims abducted in the period Oct 2019 – Sept 2020 taking into account the Christian/Muslim population levels

| | | | Religious abd | luctions Nigeri | a (Oct 2019 - 9 | Sept 2020) | |
|---------------------------------------|-------------------|------------------------|---------------------------|---------------------|---------------------------|--|--|

| Ratio of enriched and initial p | roportions | | | | | | 5,2 |

(Please note: In contrast to USA/UK usage, this table uses European standard "," for decimal points and "." Instead of a comma to mark thousands.)

Table 6 gives the data for the second reporting period (Oct 2020 – Sept 2021). In the second reporting period, whereas the total number of Christians abducted was 2,312 compared to 2,243 Muslims, thus seeming to indicate very similar targeting, when the Christian/Muslim population levels of each region is factored in, the number of Christians abducted is proportionally 9,120, which is **4.1 times more than the number of Muslims abducted** in jihadism-related violence. That is 3.9 times more than when the religious demographics are excluded.

Appendix 4A and 4B give the details per state for both reporting periods.

KEY FINDING:

The data on abductions confirms the impression that in Nigeria (especially in the northern states) jihadist-related actors are targeting Christians. Although at first sight it seemed that the number of Muslims and Christians abducted in the second reporting period were similar, further analysis shows that there is a significantly higher proportion of Christians being abducted than Muslims.

3. Distinguishing attacks on communities from other forms of attack

(The data presented in this section do not take into account the proportionality of Christian and Muslim populations in the different states but refer to the directly recorded numbers. Proportionality would further emphasize the trends.)

This section looks deeper into the attacks leading to killings or abductions. It distinguishes between **attacks on communities** and **chance attacks on individuals**. Attacks on communities are especially devastating for the victims. As indicated in the introduction, it is particularly attacks on communities which often involve a whole spectrum of additional violence and suffering: Communities raided and/or permanently occupied; fields destroyed and/or occupied; people robbed of property and livelihood; houses of worship abandoned, closed or destroyed; people driven from their homelands into dire situations of internal displacement.

Table 7 gives the data for killings for the first reporting period. In the first reporting period, the data shows that most attacks were carried out on communities (63%), and most killings occurring during those attacks (82%). The number of Christians killed during community attacks was 3,271 (68%) which was considerably higher than the number of Muslims killed - 917 (19%). In other forms of attack, Christians were also more often victims: 342 Christians were killed (32%) as opposed to 88 Muslims (8%). (See Table 1 for the remaining 60%.)

(Please note: In contrast to USA/UK usage, this table uses European standard "," for decimal points and "." Instead of a comma to mark thousands.)

Table 8 gives the data for killings in the second reporting period. In the second reporting period, the data shows that most attacks were carried out on communities (76%), with most killings occurring during those attacks (81%). The number of Christians killed during community attacks was 3,817 (55%) which was considerably higher than the number of Muslims killed – 1,109 (16%). In other forms of attack, Christians were also more often victims (31%) than Muslims (8%). (See Table 1 for the remaining 61%.)

(Please note: In contrast to USA/UK usage, this table uses European standard "," for decimal points and "." Instead of a comma to mark thousands.)

Appendix 5A and 5B give the details per state for both reporting periods.

Table 9 gives the data for abductions in the first reporting period. In the first reporting period, the data shows that most attacks were carried out on communities (75%), with most abductions occurring during those attacks (77%). The number of Christians abducted during community attacks was 722 (75%) which was considerably higher than the number of Muslims abducted – 67 (7%). In other forms of attack, Christians were also much more often victims of abduction (89%) than Muslims (6%).

Table 9: Number of Christians/Muslims abducted in the period Oct 2019 – Sept 2020 taking into account the community or other context

| Abdi | uction Analys | is: within the con | the community context or other context (Oct 2019 - Sept 2020) Community abductions Other abductions | | | | | | | | | |

The picture partly changes for the second reporting period as shown in Table 10. In the second reporting period, as before, most attacks were carried out on communities (74%), with most abductions occurring during those attacks (80%). However, in this reporting period, the number of Christians abducted during community attacks was 1,780 (45%) which is slightly lower than the number of Muslims abducted - 2,062 (51%). In other forms of attack, Christians were still more often victims of abduction (52%) than Muslims (18%).

Appendix 6A and 6B give the details per state for both reporting periods.

KEY FINDING:

The data that distinguishes between attacks on communities and other forms of attack confirms the impression that in Nigeria (particularly in the northern states) jihadist-related actors are targeting Christians - especially by attacking their communities. Everyone in Nigeria knows where the Christian communities are located. It is not simply a question of meeting people somewhere by chance and attacking them irrespective of their religious background.

4. The spread of attacks over the year

(The data presented in this section do not take into account the proportionality of Christian and Muslim populations in the different states but refer to the directly recorded numbers. Proportionality would further emphasize the trends.)

This section looks more closely at how the attacks are spread over the course of a year. The year is divided into in two main periods:

- (1) March September: These are the months with most farming activities in the northern states and is also when most attacks take place.
- (2) October February: These are the months with less farming activities.

Attacks in the farming season have the greatest impact: Farming activities are disrupted, which involves all manner of danger for survival.

Tables 11 - 14 below now look at the total number of people killed and abducted throughout the months of the reporting periods. The data includes statistics for the members of the security forces, jihadists and victims in a non-jihadist context. (See also Section 1.) These tables show the rhythm of the attacks throughout the year.

Table 11 shows the data for all attacks with killings in the first reporting period. In the first reporting period, the average number of killings per month in the farming season were 610 persons killed compared to 321 in the non-farming season. In terms of incidents, there were on average 93 compared to 44 incidents per month in the non-farming period.

Appendix 8A and 8B give the details per state for both reporting periods.

KEY FINDING:

The data clearly shows that the majority of attacks with the highest number of killings take place in the Nigerian farming season. Abductions are more equally spread over the year. Attacks during the farming season have a greater impact on the lives of the victims than attacks at any other time. This finding strengthens the suspicion that the attackers aim to kill or starve their victims, especially the Christians in northern Nigeria. Some call this "genocide by attrition".
