BASF Podcast: The Chemical Reporter - Why does milk form a skin on top when you cook it?

Ludwigshafen (ots) -

All over the world cows, goats, sheep and other mammals are industriously milked every day to provide us with a whole range of dairy products. Children love it, and lots of grown-ups also enjoy a glass of creamy milk every now and again. But you can't let the milk get too hot. Otherwise it destroys the vitamins, and something forms on top that isn't tasty in the least - a skin. In entertaining episodes our Chemical Reporter answers questions of our Podcast listeners on Chemistry in our everyday life.

BASF is the world's leading chemical company: The Chemical Company. Its portfolio ranges from chemicals, plastics and performance products to agricultural products, fine chemicals as well as oil and gas. As a reliable partner BASF helps its customers in virtually all industries to be more successful. With its high-value products and intelligent solutions, BASF plays an important role in finding answers to global challenges such as climate protection, energy efficiency, nutrition and mobility. BASF has approximately 97,000 employees and posted sales of more than EUR62 billion in 2008. BASF shares are traded on the stock exchanges in Frankfurt (BAS), London (BFA) and Zurich (AN). Further information on BASF is available on the Internet at www.basf.com.
