## **BASF Podcast: The Chemical Reporter - How is artificial rain produced?**

*Ludwigshafen (ots) -*

There have been plenty of attempts all over the world to influence the weather with chemical tricks. In Thailand, for example, what is called the 'fon luang', or 'king's rain', is aimed at preventing drought, while what are known as 'hail planes' regularly take to the skies in Germany to subdue potential hailstorms. In entertaining episodes our Chemical Reporter answers questions of our Podcast listeners on Chemistry in our everyday life.

BASF is the world's leading chemical company: The Chemical Company. Its portfolio ranges from chemicals, plastics and performance products to agricultural products, fine chemicals as well as oil and gas. As a reliable partner BASF helps its customers in virtually all industries to be more successful. With its high-value products and intelligent solutions, BASF plays an important role in finding answers to global challenges such as climate protection, energy efficiency, nutrition and mobility. BASF posted sales of more than EUR62 billion in 2008 and had approximately 97,000 employees as of the end of the year. BASF shares are traded on the stock exchanges in Frankfurt (BAS), London (BFA) and Zurich (AN). Further information on BASF is available on the Internet at [www.basf.com](http://www.basf.com).
