### Company Information

Hamburg (euro adhoc) - Hamburg, 21 August 2012. Wind turbine manufacturer Nordex has been awarded a contract for the delivery and installation of the "Honkajoki" wind farm by the Finnish Wealth Management company Taaleritehdas. With a capacity of 21.6 MW, the wind farm comprises nine N117/2400 multi-megawatt turbines mounted on top of 120-metre high towers. This is the first call-off under a framework agreement signed as recently as in June for the delivery of up to 111 turbines.

Nordex will be installing the "Honkajoki" wind farm in South-West Finland, where mean wind speeds of 7.5 m/s prevail. Thanks to the specific configuration of the N117 turbines, the wind farm will generate an above-average annual yield of up to 100 GWh, thus achieving a capacity factor of around 50%. Installation is to commence in spring 2013.

"The swift progress made in the partnership venture with Taaleritehdas underscores the professional approach taken by our partner. At the same time, this is a further key order for our N117 turbine, whose quality we are now also able to demonstrate in Scandinavia," says Nordex Management Board member Lars Bondo Krogsgaard.

### About Nordex

As one of the technological leaders in multi-megawatt wind power systems, Nordex is benefiting from the trend in favour of large-scale turbines. The range comprises one of the world's largest series-produced wind power systems (N90/2500, N100/2500, N117/2400). To date, over 1,900 turbines of this type have been installed around the world. This experience with multi-megawatt turbines gives Nordex a decisive lead over most of its competitors. Nordex has installed a total of around 5,000 turbines with an aggregate capacity of more than 7,800 MW all around the world. With exports accounting for more than 85 percent of its business, Nordex SE plays a key role in international high-growth regions. The Company has offices and subsidiaries in 22 countries around the world with a total global headcount of over 2,500 employees.
