## thyssenkrupp TWIN elevators take people to the top in stunning new Hekla tower, making the next Paris landmark even more special

Essen/Paris (ots) -

The Paris district "La Defense" will become home to a spectacular new skyscraper, featuring thyssenkrupp's unique TWIN elevators with two cabins instead of just one moving in the same shaft. thyssenkrupp Elevator will deliver twelve TWIN elevators, a technology that frees up floor space while increasing passenger transport.

Hekla Tower with its 66,000 sqm of office space will become an iconic feature in the redesign of the district - including a green footpath modelled on the famous High Line in New York City.

"The forward-looking concept of the TWIN solution played a decisive role in the development of the project, as it perfectly accommodates the tower's high standards and demanding transport capacity, without occupying additional floor-space with more elevator shafts," comments Peter Walker, CEO of thyssenkrupp Elevator. By 2022, the TWIN elevators will be moving people in the building at a speed of 7m/s.

TWIN solutions will also give a boost to other global hotspots by 2022. In the financial district of Chengdu in China, 24 TWIN custom-made elevators will be installed at two new impressive office towers, each 250 meters high.
