Casting a glance into the future of mobility: thyssenkrupp shows ropeless MULTI in the German Pavilion at EXPO 2020 Dubai

Essen/Dubai (ots) -

When EXPO 2020 opens its doors in Dubai in October 2020, the world's first ropeless elevator for skyscrapers will be featured prominently. thyssenkrupp Elevator's pioneering system was selected as one of the EXPO's lighthouse projects, and will be presented by the German Federal Ministry for Economic Affairs and Energy in the German Pavilion.

"Dubai is a city that provides a platform for inventions, attracting people and businesses from around the world. MULTI will support this aim, demonstrating to those at EXPO 2020 how technology can improve urban mobility", says Peter Walker, CEO at thyssenkrupp Elevator.

The MULTI revolution changes the way people move inside buildings, providing completely new perspectives for architects, real estate owners and passengers. By employing linear motors for each cabin, no ropes are needed at all - and MULTI can move vertically as well as horizontally. Without ropes, MULTI enables the construction of much higher buildings in cities. As it requires fewer shafts, valuable floor space is freed up for apartments.

At EXPO 2020, MULTI will demonstrate how various transportation solutions, from underground logistics to air-taxis, can be interconnected with ropeless elevators. Skybridges powered by the horizontally-moving MULTI will lift passenger transportation to a whole new level.

MULTI was unveiled in 2017 at thyssenkrupp's 800-foot tall, state-of-the-art test tower in Rottweil, Germany. The innovation is currently undergoing testing and certification in Rottweil.
