Acronis Cyber Protect Cloud: a "Cure" Against Cyber Threats

London (ots) -

[Acronis](#) , announces the launch of [Acronis Cyber Protect Cloud](#) , the first and unique [cyber protection solution](#) that integrates backup, disaster recovery, next-generation anti-malware, anti-virus, cybersecurity and management tools all in one single console. This the [result](#) of an effort from Acronis R&D centers: 500 developers and analysts.

Backup is Dead

"Traditional backup is dead because it is not secure enough, and traditional anti-viruses do not protect data from modern cyber threats. Legacy solutions are no longer able to counteract the dangers businesses face," said Acronis Founder and CEO Serguei Belousov. It is critical for organizations, in particular health systems, to secure their technology applications to minimize the risk

from cyber threats. Following a growth in cyber threats in the UK, Acronis' Cyber Protection Research Center stopped 12% more threats for its users in April 2020 compared to March.

What is new?

[It is a demonstration of the power of integration.](#) It features one unified licensing model, one agent and backend, one management console, one user interface, and a high level of integration among services - sharing data and automating actions to greatly improve the security for endpoint and edge devices.

- **For MSPs:** the tool brings vendor consolidation and frees up time to focus on other business operations
- **For enterprises and individuals:** it allows them to monitor devices and automatically stop threats
- Protection of videoconferencing (examples: WebEx and Zoom)
- URL filtering / phishing protection
- Remote Desktop connection
- Patch Management
- **Features**
 - The system runs an automatic check, and notifies the user that the call is secured
 - The system notifies of the danger and stops the malicious sites
 - IT administrators can access remotely
 - Software patches can be applied remotely
