Trade fair announcement: Update for Metro

Update for Metro

“The ring date shows what this caliber is capable of”: Metro neomatik 41 Update is the name of a brand-new watch from NOMOS Glashütte, currently debuting at Watches & Wonders in Geneva.

GLASHÜTTE, APRIL 7, 2021. The iconic model Tangente came first, and now a second renowned NOMOS model is receiving an updated dial. Metro gives its greatest performance to date in this version: Metro neomatik Update—the new watch release currently debuting at the Watches & Wonders trade fair in Geneva.

Set far out around the minute markers, where it is ideally placed, the Update date display ensures that the entire month is always in view. “This design makes specialist watchmaking expertise visible for all to see; a pure representation of what this caliber is capable of,” says NOMOS CEO Uwe Ahrendt.

In 2018, Tangente made its debut featuring the same technology. Metro is a more youthful model, cosmopolitan and modern: The first version of the watch was introduced in 2014 with manual winding. In 2016, the first version to be equipped with the ultra-slender neomatik caliber (DUW 3001) was released. Metro has always had an elegant bezel, similar to Tangente. But where Tangente is angular, this watch has characteristically round features: Metro sits flush on the wrist, its delicately domed sapphire crystal glass slips easily under any shirt cuff. Its wire lugs, the crown with fine diamond knurling (inspired by high-grade watchmaking tools), and the perfect dots of the minute markers are all distinctive features of this timepiece.

The caliber

Just like Tangente Update, Metro Update is powered by the in-house neomatik caliber DUW 6101. The incredibly precise automatic movement has a markedly larger diameter than comparable watch calibers, is ultra slender, and luxuriously decorated with embossed and gold-plated engraving on the rotor—to cite one example. The quick-set date functions in both directions. The Update watches have already received two patents: One for the pioneering date mechanism, the other for the unique date display on the dial, which makes the passage of the entire month visible to the wearer. The watchmaking company's eleventh caliber and the patents under its name directly result of the immense work conducted by NOMOS' research and development department. “It is the product of generations' worth of knowledge—and cutting-edge research,” says NOMOS CEO Uwe Ahrendt.

You can find technical information and price details for Metro neomatik 41 Update on the NOMOS website, [here](#).

Medieninhalte

The neomatik caliber DUW 6101 is produced in-house and has led to the creation of a special date display exclusive to NOMOS Glashütte: Circumscribing the dial of Metro neomatik 41 Update, it shows the entire month at a glance.

Metro neomatik 41 Update is a new release from NOMOS Glashütte debuting at the international trade fair Watches & Wonders Geneva. Its date display, which is exclusive to NOMOS Glashütte, was only made possible due to the new neomatik caliber DUW 6101, produced in-house—circumscribing the dial, it shows the entire month at a glance.

Youthful, cosmopolitan, and modern: Metro was introduced in 2014 with manual winding. In 2016, the first version to be equipped with the groundbreaking neomatik caliber (DUW 3001) was released. Now Metro neomatik 41 Update is here: The watch with the ultra-slender NOMOS automatic caliber and ring date, with a diameter of 41 millimeters.

"It is the product of generations' worth of knowledge—and yet Metro Update is completely new," says NOMOS CEO Uwe Ahrendt about the new release of the year at Watches and Wonders. The new NOMOS watch is highly complex despite its straightforward form.

With date markers in neon orange and a dark gray textile strap, Metro neomatik 41 Update has a sporty edge. The watch already has two patents to its name: One for the pioneering date mechanism, the other for the unique date display on the dial, making the passage of the entire month visible to the wearer.

Metro neomatik 41 Update is exceptionally slender, just like the automatic movement within. Metro sits flush on the wrist, its delicately domed sapphire crystal glass slips easily under any shirt cuff. Its wire lugs, the crown with fine diamond knurling (inspired by high-grade watchmaking tools), the perfect dots of the minute markers—these are all distinctive features of this timepiece.

Richly equipped and luxuriously decorated: DUW 6101, the date caliber of the new Metro Update model from NOMOS Glashütte. The engraving on the rotor is embossed and gold-plated; the quick-set date functions both forward and backward.
