Join PVFARM at Intersolar Munich - BOOTH / C4.157

Munich (ots) -

PVFARM is a revolutionary web-based software designed to streamline the process of creating solar PV layouts for utility-scale projects.

With PVFARM, users have access to editable layouts, offering a great level of flexibility with in-app editing capabilities. The software integrates with other leading platforms, ensuring users can utilize the best tools for their preferred workflow.

PVFARM's advanced automation features allow users to mix equipment and electrical designs, or run multiple grading strategies across the entire site or field-by-field. In this way users can tailor their designs to their exact specifications without sacrificing efficiency.

PVFARM offers an innovative solar "Building Information Model" (BIM) functionality. Each object within the platform contains comprehensive information for in-depth analysis, exploration, and comparison, providing users with unparalleled insights into their projects.

Our multidisciplinary platform fosters collaboration across various disciplines, including Electrical, Mechanical, Civil, Energy, and Procurement.

By bringing all these aspects together in one platform, PVFARM enables users to evaluate opportunities and trade-offs holistically, ensuring informed decision-making throughout the project lifecycle.

Come join us at Intersolar Europe on the 19th to 21st of June 2024 in booth C4.157 for a demo of our product!
