Ohme brings latest home EV charging technology to Power2Drive

Munich (ots) -

Ohme is Europe's most exciting and fastest-growing home EV charging company.

As the UK's largest smart home EV charging company and an official supplier to the likes of Hyundai, Mercedes-Benz, the Volkswagen Group and Volvo Cars, Ohme's chargers and technology are at Power2Drive on stand B6.539.

Ohme expanded its UK and Ireland base in 2024 to mainland Europe and Australia with a variety of products, specifically developed for each individual market.

With single and three phase chargers, MID certification in Germany, API integration and solar compatibility, Ohme's range of chargers are not only technologically highly capable but can meet the needs of all markets too. Ohme's ePod S boasts a shutter socket for France and Italy, while the Home Pro has Bluetooth connectivity for Spain.

Ohme's smart charging technology enables it to communicate with the user's flexible energy tariffs, automatically charging the electric vehicle when energy rates are at their lowest. This not only reduces energy costs but also maximises the use of renewable energy.

"Ohme is committed to ensuring that no driver is left behind in the e-mobility transition meaning we provide the right charger for the right market," said Stuart Clark, Ohme Sales and Installation Director. "Ohme can provide cost-efficient and legally compliant charging solutions for both personal and business drivers at a highly competitive price.

"This makes Ohme the ideal choice for drivers seeking an affordable electric vehicle home charger combined with reliable and dependable smart charging alongside precise billing functionality for business users."

As well as Ohme's popular ePod and Home Pro chargers, there is the Go cable with either a Schuko or CEE plug for business fleet drivers. The Go is one of the only affordable mobile charging solutions on the market that boast a split billing solution as well as API capability. For those business drivers, the Go can also communicate with a fleet manager's back-end platform making them a particularly valuable asset for company fleets.

Charging a Volkswagen ID. Buzz with a 77kWh battery on a full charge with an Ohme dynamic smart charger on an off-peak tariff for Hamburg, such as Octopus Go, could cost just EUR19.44*.

* Octopus Go (Hamburg) at 25.2c/kWh

About Ohme

Ohme was founded in 2017 and is the UK's leading smart charging platform provider.

At the forefront of EV charging, Ohme offers a smart charging system solution for consumers, business and fleets that enables consumers to charge at off-peak times and reduce their charging costs and environmental impact. Ohme has been named by outside investors as a 'gigacorn' - a company that has the potential to get rid of one gigatonne of CO2 from the atmosphere per year.

Ohme is the official charger provider for Motability Operations, the largest fleet in the UK. Ohme has just passed the rigorous industry standard certifications for ISO 9001 and ISO 27001 for monitoring quality processes and information security.
