Link11 enhances evoila's security offerings in Europe

Mainz/Frankfurt (ots) -

The new services combine real-time protection, zero trust, and AI-based threat detection to provide maximum resilience.

The DDoS sector has seen record levels of cyberattacks. Link11 has partnered with evoila to bolster cybersecurity in critical infrastructures and international markets. This collaboration will expand evoila's offerings to encompass DDoS protection, WAF and API security solutions. evoila's decision was influenced by the successful integration of Link11 services into its Security Operation Center (SOC) and Security 360° approach.

The partnership is driven by the growing demand for resilient, cloud-integrated security architectures. "Link11 complements our secure digital transformation vision," says evoila's Business Area Lead of Network & Security, Daniel Graßer. "Integrating Link11 technologies allows us to incorporate security into hybrid strategies from the outset, a decisive advantage in times of increasing cyber threats."

Thinking internationally: Cybersecurity "Made in Germany"

Combining evoila's cloud expertise and Link11's security know-how will result in a security offering that meets national and international requirements. Customers will benefit from:

- Real-time DDoS defense via the Link11 DDoS Protection Cloud
- Advanced managed security services with 24/7 monitoring
- Integration of zero trust network access and WAF technologies
- Significantly improved response times to security incidents
- Higher availability and reliability for digital business processes

Focus industries and target markets: The partnership focuses on industries with high security requirements, such as critical infrastructure, financial services, e-commerce, the public sector, and medium-sized companies with growing IT complexity. The 2025 joint market entry strategy includes Switzerland, Poland, and other European markets. The joint service catalog will launch next quarter. The two companies are developing security concepts and a protection package for SMEs based on evoila's SOC that uses AI to detect threats.

"Our partnership with evoila allows us to access new markets and provide security for companies in critical areas," says Jonas Jansen, Link11's Head of Channel Sales. "We are bringing our cybersecurity experience to this partnership for a secure future in Europe and added value for our customers."

About Link11:

[Link11](#) is a specialized European IT security provider that protects global infrastructures and web applications from cyberattacks. Its cloud-based IT security solutions help companies worldwide strengthen the cyber resilience of their networks and critical applications, avoiding business disruptions. Link11 is a BSI-qualified provider of DDoS protection for critical infrastructure. The company meets the highest standards in data security with its ISO 27001 certification.

About evoila:

evoila: Technical Consulting That Thinks and Acts

[evoila](#) provides technical consulting and practical implementation – no buzzword jargon necessary. Its consultants focus on providing clients with deep, objective technical understanding, many years of experience, and a commitment to creating real added value.

evoila guide companies through every phase of their technological transformation, from initial architectural considerations to production-ready implementation. Its projects don't end with go-live, but can also involve further operation, providing managed services, or facilitating the transfer of knowledge for internal further development at the customer's site.

evoila combines technical consulting with a hands-on mentality – pragmatic, solution-oriented, and always on an equal footing.
